

# Affinity Mapping Canvas

Affinity diagramming refers to organizing related facts into distinct clusters. Affinity diagramming is also known as affinity mapping, collaborative sorting, snowballing, or even card sorting. Use the canvas below to add your feedback items and group them into related topics.

The canvas is a large rectangular area with a black border. It contains five vertical rectangular boxes arranged in a row at the top, and one wide horizontal rectangular box at the bottom. Each of the five vertical boxes has a smaller horizontal rectangular box at its top, serving as a header for that column. The boxes are intended for users to write feedback items and group them into related topics.
